This item is printed on demand - Print on Demand Neuware - Research Paper from the year 2014 in the subject Chemistry - Materials Chemistry, , language: English, abstract: In this study, wollastonite ( $\text{CaSiO}_3$ ) has been synthesized by solid state reaction method at temperature range of 1050-1300 C from local raw materials e.g. silica sand and limestone with addition of small amount of  $\text{B}_2\text{O}_3$  as a mineralizer to activate the reaction process during sintering. The resulting products are investigated employing XRD and SEM techniques. -wollastonite was obtained at 1050 C and transformed to pseudowollastonite ( $-\text{CaSiO}_3$ ) at 1150 C. Physical and thermal properties have been evaluated. The batch sintered at 1250 C showed the highest value of density of about 1.98  $\text{g}/\text{cm}^3$  with high shrinkage rate as compared with other batches. The results also revealed that thermal expansion coefficient is more compatible with results obtained from natural wollastonite. 8 pp. Englisch.
