Reviews

*This book may be worth purchasing. I am quite late in start reading this one, but better then never. Once you begin to read the book, it is extremely difficult to leave it before concluding.

MEMORY AND TRANSFER OF INFORMATION: PROCEEDINGS OF A SYMPOSIUM SPONSORED BY THE MERCK SCHE GESELLSCHAFT FUR KUNST UND WISSENSCHAFT HELD AT GOTTINGEN, MAY 24-26, 1972 (PAPERBACK)

Springer-Verlag New York Inc., United States, 2012. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.The contents of this book are the presentations of a Symposium on Memory and Transfer of Information , held at Gottingen, May 24-26, 1972 . One of the main reasons for organizing this Symposium was to stimulate interdisciplinary discussion between scientists working in the field as a whole. Most of the previous meetings dealing with memory and transfer of information have tended to be rather limited in scope. The present Symposium covered a wide range of topics, including neurophysiological, neuropharmacological, neurochemical, behavioral and clinical aspects of learning and chemical transfer of information, presented by specialists in these areas. The Proceedings of the meeting present a large number of previously unpublished results, e.g., recent experiments in neurophysiology and neurochemistry, new approaches to chemical transfer of learned information, experiments using synthetic scotophobin and drugs influencing learning and behavior. The importance of interdisciplinary discussion is perhaps most clearly emphasized by the advances in neurochemical micromethods which are of particular interest to scientists working on the chemical transfer of information. Only such interdisciplinary collaboration between highly specialized scientists guarantees further progress and deeper insight into the complex, and until now little understood, mechanisms of that most intricate of organs, the brain.
