These physical properties include density, shrinkage, transference of moisture, hygroscopicity, specific heat, heat conductivity, heat of absorption of water in wood, and permeability of wood by liquids and gases. It is often necessary for financial reasons to reduce the time required properly to season wood by open-air drying. Moreover, for many purposes it is desirable to dry the wood more thoroughly than is possible in the open air and to employ conditions which will reduce its hygroscopicity, or tendency to shrink or swell. For these reasons dry kilns are almost universally employed for high-grade lumber, and frequently even for the poorer grades. In the drying of hardwoods it is estimated that about 10 percent of the material dried is either ruined or lowered in...
