

G-500: The Twelve Forces of Movement

By Darren St. John Sumner

Legend Press Ltd, United Kingdom, 2013. Paperback. Book Condition: New. 292 x 214 mm. Language: English . Brand New Book ***** Print on Demand *****.This is a published scientific article advertised on this website, known as G-500: The Twelve Forces of Movement. It describes in detail through a series of pictures and diagrams, the importance of movement as a constant force in mechanics and dynamics, how movement uses momentum and motion to interact with bodies and objects, how they are formed into various shapes and patterns, and how they can become independent and mobile from movement. The article utilises gas giants like worlds similar to the outer planets in our very own solar system (e.g Jupiter, Neptune) in elaborate illustrations to represent the bodies and objects at work, explaining the principles involved. I have decided to use these types of planets in part to present the forces and reactions as an alternative to the typical and intimidating mathematical formulas and equations that are displayed in other such journals; the other reason is that gas giants are colourful metaphors to ease and entice the reader instead of the standard and sometimes common mono-coloured spheres, or basic symbols. This is done so...

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).

-- Prof. Kirk Cruickshank DDS

This kind of book is every little thing and taught me to looking ahead of time and a lot more. I am quite late in start reading this one, but better then never. I found out this book from my dad and i encouraged this pdf to find out.
