By Chester Arthur Buckner

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 Excerpt: .and the range below the median of the third shows more extreme cases. All three curves tend to bring out the difference between the distribution of scores above the median and the distribution below. The range below is greater and more regular in its decline. The two halves of the curves show one similarity which is spurious. All the scores of 5Q or more are grouped into the last frequency because of the extreme range Figs. 16a to 17c. Distribution (in Per Cents) of Scores Above and Below the Individual Medians in the Eleven Tests Transmuted into Multiples of Q by the Original Distributions. in the graph which a few of the scores would have necessitated, --18.7Q in one case. This suggests a relation between the high and low scores of extreme variability which does not exist. Figs. 17a, 17b, and 17c represent the distribution of...
