Caven Press. Hardcover. Condition: New. 132 pages. Dimensions: 8.6in. x 5.7in. x 0.7in. EMBRYOS AND ANCESTORS by G. R. DE BEER. PREFACE: TEN years ago I published a book under the title Embryology and Evolution, in which I made an attempt to show that after rejecting the theory of recapitulation, a much better synthesis could be made of our knowledge of embryonic development and evolutionary descent, opening up new fields for observation and co-ordination of studies in embryology, genetics, and evolution. This work has for some little time been out of print, and I have yielded to the demands of my friends to produce it again. During the intervening years a great deal of new evidence has become available, and these fresh data have fitted into place in my scheme like pieces of a puzzle, for I have seen no reason to alter the plan of my former book in the slightest degree. The present book is my previous one brought up to date and enlarged. I have recently been engaged in a study of the bearings of embryology on homology, taxonomy, and other special aspects of zoology. My views on these matters have been published in Evolution Essays presented to Professor E. S. Goodrich, edited by myself, and in The New Systematics, edited by J. S. Huxley. I have therefore not felt called upon to repeat them here, except in so far as they bear directly on the problem of the relations between embryology and evolution. It has been very encouraging to me to note the lively interest in these problems shown in recent years. The first necessity in Biology will always be further observation and experiment but as Dr. Woodger aptly points out, progress in thought is necessary as well. Outworn theories are not only dull in them selves,...
