

Some phenomenological aspects of low scale quantum gravity

By Das, Prasanta Kumar

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Brane-World Phenomenology | As a resolution of the well-known hierarchy problem, like supersymmetry the model of extra spatial dimension(s) proposed by N.~Arkani-Hamed, S.~Dimopoulos and G.~Dvali (ADD) in 1998, and by L.~Randall and R.~Sundrum (RS) in 1999, have generated considerable enthusiasm among the physics community. In this thesis, we have made a phenomenological study of both of these models. After a brief introduction of the ADD model and the RS model in chapter 1 and chapter 2 and a brief review of the existing phenomenological studies in chapter 3, we have derived the order κ^2 Feynman rules in the context of ADD model. In chapter 5, we have investigated the effect of gravity in the DIS (i.e. the process $e^+ + p \rightarrow e^+ + X$) and compare our result with that at HERA to constrain the parameters of the RS model. In chapter 6 and chapter 7, we have investigated several phenomenological consequences of the radion (which appears naturally in the RS model in order to stabilize the size of the fifth spatial dimension). Chapter 8 contains the summary and the conclusion of the thesis. | Format: Paperback | Language/Sprache: english | 112 pp.

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You won't feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).

-- Prof. Kirk Cruickshank DDS

This kind of book is every little thing and taught me to looking ahead of time and a lot more. I am quite late in start reading this one, but better then never. I found out this book from my dad and i encouraged this pdf to find out.

-- Justus Hettinger
