

Capacity Improvement and Cell Range Extension By Multi-Beam Antenna

Filesize: 6.01 MB

Reviews

Comprehensive guideline for ebook fans. I have read and i am certain that i am going to going to go through yet again yet again down the road. You wont truly feel monotony at whenever you want of your own time (that's what catalogs are for concerning when you check with me).

(Keegan Abernathy)

CAPACITY IMPROVEMENT AND CELL RANGE EXTENSION BY MULTI-BEAM ANTENNA

LAP Lambert Academic Publishing Apr 2015, 2015. Taschenbuch. Condition: Neu. Neuware - This work points out most problems and recommends some solutions to re-design a quiet small smart antenna panel with low cost and to improve capacity and optimise cell range by using adaptive multi-beam antenna techniques for telecommunication applications. The optimisation is possible with the help of algorithms such as Butler Matrix Arrays. A mathematical model to ideal antenna distributions is clearly mentioned. This has been achieved by the means of the near-field measurement techniques. The use of Fourier Transform (FT) techniques has been achieved to predict the far-field from the near field of an Antenna Under Test (AUT). The measurement process is precisely simulated and evaluated by using advanced engineering software such a MathCAD or Matlab program. Requirements and implementations to model the far-field from the near-field in one dimension, two dimensions and three dimensions are clearly highlighted. 64 pp. Englisch.
