The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.

Excerpt from An Abstract Formulation of the Method of Separation of Variables The method of separation of variables is one of the few methods by which partial differential equations can be solved explicitly. The method, however, is obviously limited to those cases where the partial differential equation expressed in a suitable coordinate system, has solutions which are products of functions of the separate coordinates; consequently, much research has been devoted to the determination of the coordinate systems in which particular equations, such as the wave equation, have separable Solutions. Along with this, there has been a study of the special functions defined by the separate differential equations. However, even when the separable coordinate systems and the special functions needed have been determined, there is still one question to be discussed, namely the question of the type of boundary conditions for which the method of separation of variables can be used. To answer this question, it was found convenient to place it and the whole method of separation of variables in an abstract framework.
