Brand New Book ***** Print on Demand *****.Theta Criteria are based on operator s theory and matrices decompositions. The main idea is to evaluate differences between sets of operators eigenvalues eigenvectors or eigenfunctions. Theta Criteria will lead to more efficient analysis, optimization and prognosis of multivariate systems and applications. Theta Criteria can be used for data set mining and image processing. The book is designed as a complementary tool for applied mathematics methods. This book is great. It is written in simple words and not difficult to understand. I discovered this pdf from my dad and I suggested this ebook to find out.
