Reviews

This is the finest book i have got go through right up until now. I have got read and i also am confident that i am going to planning to read once again yet again in the future. You will not truly feel monotony at at any time of the time (that's what catalogs are for about if you check with me).

(Taylor Medhurst)

Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: .cent. For a general formula, then, we may use the fraction k , and then, assume for particular classes of localities, a mean value of k , provided the variation of humidity in any proposed class of localities is not too great. Using the general value, k of the humidity, we may correct the reading of the barometer so that it may be used in the formula for density, as follows: Let p be the reading that would, if produced by dry air, pertain to the actual density for which a barometric reading p is recorded; then, p_v being the vapor-pressure at the time, $P = P + P_v = P - p_v = P - kF$ (4) For a barometric pressure p , for dry air, we have from (2) $d = 492 \text{ lb}$ Using with this formula the values of the readings for standard conditions; viz: bar: 29.5275; ther. 59; $k =$ we have representing the standard density by $Ht S$, 29.4335 492 since $F = 0.50$, for standard conditions. Dividing (5) by (6), member by member, we have 5, $l = 1460 + t x = L8-y 6--0=-TiEP$ (7) From this foimula, we might compute a table of values of y -for any assumed mean percentage of saturation; e. g., for $k = 0$ that is, for dry air; or for k , i. e. 50 saturation, or as in Artillery Notes No. 25, for 78 r. h. Taking k as, which approximates sufficiently to the latter for all practical purposes, our formula...
