### ***Reviews***

*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.*

If  $s$  oc  $f$  when  $t$  is constant, and  $s$  a/ when  $t$  is constant, and  $2s=f$  when  $1 = 1$ , find the relation connecting,  $?$ ,  $/$ ,  $l$ . It follows by a slight extension of 20 (5) that, when  $/$  and  $l$  both vary,  $s: ft1$ . Hence  $s = afp$ , where  $a$  is a constant, which we have to determine. Now, when  $1 = 1$ ,  $s=J/$ , hence  $/=-/l2$ , that is,  $kf=af$ ; in other words, we must have  $a= J$ . The relation required is, therefore,  $s=fp$ . Example 2. The thickness of a grindstone is unaltered in the using, but its radius gradually diminishes. By how much must its radius diminish before the half of its mass is worn away? Given that the mass varies directly as the square of the radius when the thickness remains unaltered. Let  $m$  denote the mass,  $r$  the radius, then by data,  $m=ars$ , where  $a$  is constant. Let now  $r$  become  $r$  , and, in consequence,  $m$  become  $km$ , then  $hn=ar1$ , hence  $ar12 J-i rcr1 m r 2$  that is,  $=4$ ; whence  $--r. r V$  It follows, therefore, that the radius of the stone must be diminished in the ratio  $1: y/2$ . Example 3. A and B are partners in a business in which their interests are in the ratio  $a: b$ . They admit C to the partnership, without altering the whole amount of capital, in such a way that tho interests of the threo partners in the business are then equal...
