Not illustrated. 1888 Excerpt: . haphazard, but it would always be true that any product or quotient of units could, by the relation $K = LT$, be reduced to the same dimensions in terms of M, L, T, and either K or L , whether they were or were not originally expressed in terms of one of these two last quantities only. The method can be applied, not only to express more clearly that the absolute dimensions of the electrostatic and electromagnetic systems are the same, but to transform the numerical expressions for given concrete electrical or magnetic quantities from the one system of units to the other. In order to transform a length from one scale to another by the relation $n, L_j = 2LS$ we must know not only n , or W_j but also the numerical value of the ratio $L, /L_j$. In like manner, to transform electrical quantities from a system expressed in terms of K to a system expressed in terms of f_i , we must know the numerical value of the ratio $K-i-i/LT-1$. If, then, v be the numerical value of the velocity of light expressed in terms of the units L and T, we can transform both dimensionally and numerically by the relation $K-/t-i=fLT$. Thus, to find the number of C.G.S. electrostatic units in y C.G.S. electromagnetic units of quantity, we have $x M T- K- =y x L M1/-;-. =yL-, TK-/it- =i, L- Tx-LT=iy$. To find the number of C. G.S, Electromagnetic Units of...
