# DISCHARGE MEASURING STRUCTURES

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Its Fabrication and Calibration | Discharge coefficient is usually dependent on dimensionless parameters such as Reynold s number and Weber number associated with dynamic conditions of flow over the structure, and ratios of weir, notch and flume dimensions which reflect variations in the geometrical design of the measuring structures. The data are presented to provide engineers with a means of estimating discharge coefficients for rectangular weirs whether they are flat-topped or sharp-crested....
