

Screening for Speech and Language Delay in Preschool Children: Systematic Evidence Review Number 41

By U. S. Department of Health and Human Services

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 180 pages. Dimensions: 11.0in. x 8.5in. x 0.4in. Speech and language development is considered a useful indicator of a child's overall development and cognitive ability by experts and is related to school success. Identification of children at risk for developmental delay or related problems may lead to intervention services and family assistance at a young age when chances for improvement are best. This rationale supports preschool screening for speech and language delay, or primary language impairment disorder, as a part of routine well child care. This evidence synthesis focuses on the strengths and limits of evidence about the effectiveness of screening and interventions for speech and language delay in preschool age children. Its objective is to determine the balance of benefits and adverse effects of routine screening in primary care for the development of guidelines by the U. S. Preventive Services Task Force (USPSTF). The target population includes all children up to age 5 years without previously known conditions associated with speech and language delay, such as hearing and neurological impairments. The evidence synthesis emphasizes the patient's perspective in the choice of tests, interventions, outcome measures, and...
