FABRICATING BRAIN TISSUE BY GROWING STEM CELLS ON CORAL SKELETONS

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Stem cells convert into neurons and glia when cultivated on three-dimensional aragonite crystalline matrix | The brain has a limited ability to recover from injury; however, the discovery of stem cells that can differentiate into neural cells neurons and glia - creates conditions for generation of new cells to replace the damaged tissue. We have developed a method to facilitate achievement of this long-sought-after goal - cultivating stem cells on coral skeleton adjacent to cultures of primary neural cells....
