Excerpt: .two roots of the equation, say $7-$, and $7a$, are equal. The necessary conditions then give have single contact, the discriminant of $u + kn$ has equal roots, and the conics cannot be reduced to the normal forms So also, if two quadrics have single contact they cannot be reduced to the normal forms. This failure explains some anomalies. Two conics can, in general, be written: $0 + 3/ + z = 0$, $ax + by + oz = 0$, and if $a = b$ the conics have double contact, apparently one condition instead of two. Two quadrics can be written $31 + 3/2 + z^2 + 102:0 ax + by + oz + dw = 0$. If $a = b$ they interest in planes or have double contact which requires two conditions. It is only a particular case of the last that any quadric may be reduced to the form $aw + by + oz + dw = 0$; if $a=b= 0$ it reduces to a pair of planes. Two conditions here take the place of three. These all arise from the reduction failing unless a further condition holds; assuming which implicitly we seem to arrive at less than the proper number of conditions. Suppose now that all the first minors do vanish for 7 , the reduction to the normal forms will again be possible. The quantities $l: m: n$: have now only to satisfy $n-2$ linear independent equations. They may therefore each be expressed linearly in terms of one...
