

Storia Della Guerra Dell Indipendenza Degli Stati Uniti D'America (2)

Filesize: 8.49 MB

Reviews

The book is great and fantastic. It is written in straightforward words and phrases rather than difficult to understand. You won't really feel monotony at any time of your respective time (that's what catalogues are for regarding should you question me).
(Payton Miller)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 88 pages. Original publisher: Research Triangle Park, N. C. : U. S. Environmental Protection Agency, Office of Air Quality Planning and Standards, Emissions Monitoring and Analysis Division, Emission Measurement Center. OCLC Number: (OCoLC)49761277 Subject: Air -- Pollution -- Measurement. Excerpt: . . . -1 3 (0. 92 0. 08 m g m). Note, the correlation for the process controlled by the baghouse was developed from only three data points within a narrow opacity range of about 6 percent to 8 percent. This suggests caution when interpreting these results. Other tests to correlate opacity and mass concentrations were done at three oil-fired power plants (Conner, Knapp, and Nader, 1979). The boilers had no PM emission control equipment installed. Two plants combusted low-sulfur oil, and the boilers were fired at excess oxygen levels between 1. 5 percent and 3. 0 percent. The third plant combusted high-sulfur oil, and the boiler excess oxygen was at 0. 2 percent. Opacity measurements were made with a Lear Siegler RM41P. Mass concentrations were determined by EPA Method 5. The data from the two similar plants were combined, and a light attenuation coefficient per mass concentration ratio-1 3 (at actual stack conditions) of 0. 43 m g m was calculated. This relationship was calculated over an opacity range from about 2. 5 percent to 6. 7 percent and forced through the origin. The data for the high-sulfur, oil-fired boiler produced a light attenuation coefficient per mass-1 3 concentration ratio (at actual stack conditions) of 0. 20 m g m. This relationship was calculated from data collected during two sampling efforts 6 months apart covering an opacity range from about 6 percent to 11 percent. This relationship was...
