

## Principles of Geometry, Vol. 4 (Classic Reprint)

Filesize: 1.42 MB

### **Reviews**

*Very good e-book and helpful one. It is among the most awesome publication we have read. Its been developed in an remarkably simple way in fact it is simply right after i finished reading this book through which basically transformed me, affect the way i really believe.*  
(Prof. Kacey O'Hara)

Forgotten Books. Paperback. Condition: New. This item is printed on demand. 270 pages. Dimensions: 9.0in. x 6.0in. x 0.6in. Excerpt from Principles of Geometry, Vol. 4 The present chapter consists of various examples of the interest and importance of the comparison of the geometry of spaces of different dimensions. The first section (pp. 1-32) is concerned with relations between theorems in two and in three dimensions. The second section (pp. 32-40) deals with the representation in four dimensions of some results belonging to ordinary space of three dimensions. The last section (pp. 40-64) deals with the employment of space of five dimensions for the consideration of properties arising both in three and in two dimensions. Some few references occur to space of any number of dimensions. Section I. Theorems Of Two And Three Dimensions The conics touching the five from six arbitrary lines of a plane. Let three lines,  $p$ ,  $q$ ,  $r$ , be given in a plane, as well as a fourth line containing two points,  $I$ ,  $J$ ; let any conic be drawn touching the four lines; let be the conic, through the points  $I$ ,  $J$ , which contains the three intersections of the lines  $p$ ,  $q$ ,  $r$ ; then this conic passes through the point,  $S$ , in which intersect the tangents from  $I$ ,  $J$  to the former conic. Or, in other words (Vol. II, p. 81), the circle through the intersections of three tangents of a parabola contains the focus of this parabola. Thus if four lines be given, beside the line which contains the points,  $J$ , the conic touching the five lines being then definite, the four conics, all through  $I$ ,  $J$ , each containing the intersections of three of the four given lines, meet in a point, namely, the point,  $S$ , in which the tangents from  $I$ ,  $J$  to the former conic intersect...
