Reviews

It is great and fantastic. I actually have read and so i am certain that i am going to going to go through once again yet again in the future. I realized this ebook from my dad and i encouraged this book to find out.

SHIFTING BORDERLINES: HOW SCIENCE FICTION IS BECOMING SCIENCE

CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 198 pages. Dimensions: 8.0in. x 5.2in. x 0.6in. The enabler of the quantum evolutionary leaps of our times is the rapid progression of science and the proliferation of scientific fields tackling very specialized subjects like bioinformatics, artificial intelligence and nanotechnology. Science is growing fast and unabated. Wars, economic downturns, and all other detrimental events have little effect on the expansion of science. What started with few fields (mathematics, chemistry, biology) has mushroomed into thousands of domains that span every aspect of humanity. New disciplines like Very Large Scale Integration (VLSI) are commanding armies of loyal followers that diligently strive to create the next substantial breakthrough in the field. The book consists of four chapters that are mostly dialogues about science, technology and the future. Each chapter starts with an introduction on the subject at hand and tails into a dialogue. Four main topics are discussed: Robotics: How some want machine to take over, others want machines to go away, yet everyone is in an urgent rush to surround himself with as much electronics as possible. The debate heats up to a boiling point on the topic of machine intelligence and its effect on humanity. Science Eccentricities: Why black holes suck, Relativity is about absoluteness, and the universe is multidimensional. Bio-Universe: How our age old pursuit to understand the intricacies of the inner space will be trivial compared to what is about to materialize in the coming few years, especially on the aging-combat front. The Future: Why a trip to the future might be much more complicated than Michael J. Fox's time machine journeys. The discussion heats up on paths of the future; the relatively near future. The cast includes Herbert, a brilliant physicist, Buzweil, an optimistic futurist, John...
