## Cold Light: Creatures, Discoveries, and Inventions That Glow (Hardback)

By Anita Sitarski

Boyd's Mills Press, United States, 2007. Hardback. Condition: New. Language: English . Brand New Book. A 17th-century alchemist tried to turn a stone into gold. It didn't turn into gold but glowed in the dark instead. The alchemist began to mould the first luminescent objects. A light also came on one night for the famous chemist Robert Boyle. After he saw a raw chicken glowing in his kitchen, he began his own research into luminescence. These scientists and many others have explored the science and wonder of cold light - the chemistry of animals and things that make light but not heat. With light humour, Anita Sitarski brings the thrill of discovery to life as she recounts the stories of the alchemist, Boyle, the adventurers who first saw bizarre creatures glowing in the depths of the sea, and others. Using easy-to-grasp applications of biochemistry, genetics, and electronics, today's scientists create amazing inventions and applications, from mice that glow to the burgeoning technology of LEDs. Awe-inspiring, full-colour photographs accompany the compelling, fact-filled text in these scientific explorations. Significantly, luminescence sheds light on the adventure of science.

### Reviews

*This pdf is wonderful. It is definitely simplified but excitement from the 50 percent in the ebook. You won't sense monotony at any time of your time (that's what catalogues are for relating to should you request me).*
