Forgotten Books, 2017. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from The Physical Review, Vol. 33: A Journal of Experimental and Theoretical Physics N a paper by Brown and Stebbins1 it was shown that the light-sensi tiveness of a certain selenium cell was a function of its resistance whether that resistance was conditioned by temperature, pressure, light or other agencies. This conclusion, together with the results of recent investigations, has led me to formulate an hypothesis for explaining the changes in the electrical conductivity occurring in light-sensitive sele nium. The statement and the discussion of this hypothesis together with the results of investigations pertinent to this hypothesis will form the material of this paper. As the amount of data that must be cor related is quite large indeed, particular attention will be given only to the various effects produced by light. The hypothesis is that all light-positive and light-negative varieties of selenium consist of various mixtures of three kinds of selenium which we will call A, B and C and that under the action of light A is changed into E and B is changed into C according to the reaction.
