Salad plants generally contain but little nourishing food of the heat-giving and flesh-forming kinds. But they are useful as being comparatively rich in saline matters, especially in potash salts, which are generally extracted from cooked vegetables in the process of boiling. They serve also to introduce large quantities of water into the system, and are refreshing additions to richer foods, especially in hot weather, when their crisp, cool succulence is peculiarly acceptable. In order to be thus juicy and crisp, lettuces and other salads, such as cucumbers, must not be gathered when wilted and drooping after a hot day; too often this is the case, or else subsequent partial drying causes toughness. To obviate this defect, the root of lettuce or celery, c., when dug up, should be...
