John Wiley and Sons Ltd, United States, 1999. Hardback. Book Condition: New. New.. 246 x 159 mm. Language: English . Brand New Book. Introducing the next generation in optimization modeling. This book presents a dynamic new approach to optimization modeling in the design and management of surface water reservoirs. More accurate in its representation of critical flows than traditional synthetic hydrology approaches, ReVelle s model utilizes both deterministic and stochastic constraints to derive a unified water supply, allocation, and reallocation optimization model. Dr. ReVelle begins with an in-depth presentation of conventional approaches to optimizing various reservoir functions and services- including water supply, flood control, hydropower, irrigation, navigation, and recreation. He then describes a method to enhance performance by allocating services and functions. Finally, he develops a unified optimization model that can be applied both to existing reservoirs and in the design of a new generation of efficient surface water reservoirs. A valuable working resource for water resources analysts, engineers, and managers, **Optimizing Reservoir Resources** features: A new model to achieve desired levels of water supply reliability. A multiobjective framework for exploring reservoir services. Storage rule curves derived with anti-zigzagging methods. Improved cost allocation models. Original techniques for linearizing the nonlinear hydropower equation and for the derivation of the storage-energy curve. Techniques for allocation and reallocation of reservoir services through the derivation of an economic supply curve.
