

Synthesis and Aggregation of Peptidehelices in Artificial Membranes

Filesize: 1.96 MB

Reviews

An exceptional ebook and also the typeface applied was intriguing to read through. I have got read and i also am sure that i am going to likely to go through yet again once more in the foreseeable future. I discovered this pdf from my dad and i advised this ebook to find out. (Dr. Raven Ledner)

SYNTHESIS AND AGGREGATION OF PEPTIDEHELICES IN ARTIFICIAL MEMBRANES

[DOWNLOAD](#)

Cuvillier Verlag Nov 2012, 2012. Taschenbuch. Book Condition: Neu. 212x149x12 mm. Neuware - The function of membrane proteins is mainly dependent on their aggregational behavior. Some are active as monomers, whereas others need to assemble into oligomeric states.(1) In this context, molecular recognition, which is realized within the membrane and in the adjacent water layer, is crucial to achieve a specific assembly. In order to establish a well defined model system to study assembly processes in membranes, a recently reported D₂Alternating double helical hairpin construct in structural analogy to the natural antibiotic gramicidin A was utilized.(2,3) Recognition at the membrane/water interface was addressed via metal complex formation as well as duplex formation of a short PNA sequence. To achieve recognition within the bilayer, nucleobases or polar amino acid residues, respectively, were introduced in the center of the hairpin TMD. Additionally, fluorophores were attached applying an orthogonal protecting group strategy. The functionalized TMDs were reconstituted in large unilamellar vesicles (LUVs). The in membrane pore formation by adopting 5.6 double helices was investigated using CD spectroscopy and the dynamic aggregation process was determined using fluorescence probes for Fluorescence Resonance Energy Transfer (FRET). For orientational studies as well as distance measurements of membrane incorporated peptide homodimer structures, spin probes were introduced within the lead structure. These homodimers were incorporated in LUVs and the 5.6 structure was determined via CD analysis. Further investigation will be performed applying EPR measurements. For the purpose of creating an alternative to the FRET assay, a fluorescence probe directly sensing the micro environment within the PNA recognition unit was utilized. As recently reported, vinyl modification of guanine at position 8 provides fluorescent behavior of the nucleobase. To benefit of the fluorescent properties also in PNA oligomers, the 8 vinylguanine PNA building block was synthesized. Incorporation into PNA oligomers...
