

## Data Mining Techniques Using MATLAB (Paperback)

Filesize: 8.52 MB

### ***Reviews***

*This pdf is fantastic. It really is basic but shocks inside the 50 % in the pdf. I realized this pdf from my i and dad encouraged this pdf to discover.*

**DATA MINING TECHNIQUES USING MATLAB (PAPERBACK)****DOWNLOAD**

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Data mining is the process of discovering actionable information from large sets of data. Data mining uses mathematical analysis to derive patterns and trends that exist in data. Typically, these patterns cannot be discovered by traditional data exploration because the relationships are too complex or because there is too much data. These patterns and trends can be collected and defined as a data mining model. Mining models can be applied to specific scenarios, such as: -Forecasting: Estimating sales, predicting server loads or server downtime -Risk and probability: Choosing the best customers for targeted mailings, determining the probable break-even point for risk scenarios, assigning probabilities to diagnoses or other outcomes -Recommendations: Determining which products are likely to be sold together, generating recommendations -Finding sequences: Analyzing customer selections in a shopping cart, predicting next likely events -Grouping: Separating customers or events into cluster of related items, analyzing and predicting affinities Building a mining model is part of a larger process that includes everything from asking questions about the data and creating a model to answer those questions, to deploying the model into a working environment. The availability of large volumes of data and the use of computer tools has transformed the research and analysis of data orienting it towards certain specialized techniques included under the name of Data Mining. Data Mining can be defined as a process of discovering new and significant relationships, patterns and trends when examining and processing large amounts of data organized according to Big Data techniques. Data Mining methodologies include SAS Institute s SEMMA methodology and IBM s CRISP-DM methodology. -SAS Institute defines the concept of Data Mining as the process of Selecting, Exploring, Modifying, Modeling and Assessment large...
