PHI Learning, New Delhi. Paper back. Book Condition: New. 608pp. This book is written specifically to address the course curriculum in Engineering Physics for the first-year students of all branches of engineering. Though most of the topics covered are customarily taught in several universities and institutes, the book follows the sequence of topics as prescribed in the course syllabus of engineering colleges in Tamil Nadu. This new edition of the book continues to present the fundamental concepts of physics in a pedagogically sound manner. It includes a new chapter on Thermal Physics, which is essential for core engineering students. Furthermore, topics like crystal growth techniques, estimation of packing density of diamond and the relation between three moduli of elasticity are included at the appropriate places, to improve the understanding of the subject matter.
