

Astronautics and Aeronautics, 1970: Chronology on Science, Technology, and Policy

Filesize: 5.47 MB

Reviews

This book will not be simple to get going on reading but extremely exciting to read through. Yes, it can be play, still an interesting and amazing literature. I am very easily could possibly get a delight of reading a written book.
(Rene Olson)

ASTRONAUTICS AND AERONAUTICS, 1970: CHRONOLOGY ON SCIENCE, TECHNOLOGY, AND POLICY

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 522 pages. Dimensions: 10.0in. x 7.0in. x 1.2in. This volume provides an immediate reference to aerospace-related events of 1970, enabling all of us to broaden or to refresh our crowded memories. As part of NASA chronology series it is intended to help historians and other analysts in preserving historical accuracy and precision. Perhaps the Apollo 13 problems that resulted in using the lunar lander Aquarius as a lifeboat will be the most readily recalled of the 1970 events. Yet, as this volume clearly indicates, there were many significant milestones in space and aeronautics. The lunar samples returned by Apollo 11 and 12 were intensively studied in the United States and 16 other countries; the last two Apollo missions scheduled were canceled; the feasibility of reusable space shuttles as a means of reducing the cost and expanding the versatility of space operations was examined in greater detail; the Skylab program to evaluate man's adaptation to the space environment proceeded toward its launchings in early 1973. Dividends continued to be returned from our scientific satellites already in orbit: Pioneer VI completed six orbits of the sun, providing data on solar weather on the far side of the sun; Oao II began transmitting ultraviolet spectral data on some 25 000 stars; Ogo III, IV, V, and VI made sky surveys which could correlate geophysical data from other satellites, sounding rockets, and ground-based instruments. Among the 38 new payloads launched by the United States were the first prototype satellite for an operational weather system, ITOS, and three Intelsat communications satellites. Japan and China both launched their first satellites during 1970. In aeronautics, research and development on the supercritical wing culminated in the first flight tests. And the X-24 lifting body...
