Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Review of American Chemical Research, Vol. 6: 1900; Contributed by Members of the Instructing Staff of the Massachusetts Institute of Technology Jr. Phys. Rev., 9, 41-56. - The author has determined the electrical conductivity of both concentrated and dilute aqueous stannic chloride solutions, and the increase in their conductivity with the time. He finds that very concentrated solutions (2.5 equivalents per liter) exhibit no time-change; that solutions of medium concentrations increase slowly in conductivity, while dilute ones (normal) change so rapidly that the initial velocity is not measurable. The maximum values reached by the dilute solutions are identical with that shown by hydrochloric acid of the same concentration. These results are substantially the same as those obtained by Goodwin (this Rev., 3, 22) in his similar investigation on ferric chloride. The assumption of complete hydrolysis in dilute solutions is in complete accord with the freezing-point determinations of Loomis. The transference experiments of Hittorf, and the thermochemical measurements of Thomsen. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
