Synthesis of Water Soluble CdSe Quantum Dots for bioimaging field

By Deepak Kumar Gupta

LAP LAMBERT Academic Publishing. Paperback. Book Condition: New. Paperback. 72 pages. Dimensions: 8.7in. x 5.9in. x 0.2in. A new class of fluorescent labels has been produced by conjugating water soluble quantum dots (QDs) with biomolecules. Quantum Dots (QDs) are semiconductor nanocrystals (110 nm) exhibiting distinctive photoluminescence (PL) properties due to the quantum confinement effect. The resultant nanoprobles can potentially overcome many of the functional limitations encountered with organic dyes. High-quality quantum dots are highly stable against photobleaching and have narrow, symmetric emission spectra. In particular, the emission wavelength of quantum dots can be continuously tuned by simply changing the particle size, and a single light source can be used for simultaneously excitation of all different-colored dots. These novel optical properties can render quantum dots ideal fluorophores for sensitive, Multicolor and multiplexing applications in molecular biology and bioengineering. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.

Reviews

A whole new e book with a brand new standpoint. I have read through and i also am certain that i am going to planning to read again yet again later on. I found out this book from my i and dad advised this pdf to learn.

-- Audrey Lowe I

It is fantastic and great. It is really simplified but unexpected situations from the 50 % in the ebook. I discovered this ebook from my dad and i suggested this book to learn.

-- Dr. Luna Skiles
