Forgotten Books, 2017. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Effect of Manganese on Pineapple Plants and the Ripening of the Pineapple Fruit The pineapple belongs to the family Bromeliaceae, several species of which. Are of epiphytic habit. With the exception of the black moss of the South which, as its name indicates, has a moss-like habit of growth and small terete branches, the members of this family which we have been able to examine Show very similar structure and arrangement of the cellular tissue of the leaves. The pineapple presents certain peculiar habits of growth which constantly remind one of the fact that it belongs to a family of plants in which a number of epiphytic species occur. The family as a whole Occurs principally in tropical and subtropical climates and exhibits a power of adaptation to a wide range of conditions of soil and rainfall. The studies reported in this bulletin were undertaken jointly as a continuation of the work reported by this station regarding the effect of manganese on pineapples, and also regarding some of the points which have been observed in the chemical composition of pineapple fruits in different stages of development.1 It will be noticed in studying the results which we have obtained that the anatomical and chemical findings are in remarkable harmony and that they mutually assist in explaining each other.
