

A Laboratory Manual of Invertebrate Zoology

Filesize: 1.33 MB

Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Ally Reichel)

A LABORATORY MANUAL OF INVERTEBRATE ZOOLOGY

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .is an enlarged portion of the alimentary canal. This has no relation to the heart, for which it is sometimes mistaken. Excretory and Genital Systems.--The excretory system consists of a pair of dark colored glandular organs that lie beneath the pericardium. Each communicates with the pericardium by a small opening that is not easy to demonstrate in dissections, and with the cloacal chamber by another small opening. By turning the two gills (of Venus) dorsally a very small papilla may be seen, just beneath the free border of the inner gill, lying in the cloacal chamber. On the tip of this papilla are two openings. The inner one is the opening of the excretory organ. The outer one is the opening of the genital duct. The genital glands are light colored organs that, during the breeding season, extend through the principal part of the visceral mass. Neither the genital nor the excretory systems can be profitably studied in a general dissection of this form. In Unio the excretory organs are more satisfactory for study. Do you understand the supposed significance of their connection with the pericardium? Nervous System.--1. Carefully remove the body-wall by the side of the esophagus and notice the cerebral ganglion of the corresponding side. This is a rounded, slightly yellow organ, about the size of a pin-head, lying just posterior to the dorsal border of the anterior adductor muscle. (In Unio it is more ventral in position.) The cerebral ganglia of the two...
