Excerpt from Ordinary Foundations: Including the Coffe-Dam Process for Piers; With Numerous Practical Examples From Actual Work The necessity for a second edition of this book has made it possible to make valuable additions to the text, by which the subject of ordinary foundations is more comprehensively covered. The construction of piers the use of metal cylinders; with timber caissons by open dreading; and the construction of ordinary-sized foundations by the use of pneumatic caissons, has furnished another chapter. A chapter has been added on the subject of foundations, which coven the bearing capacity of soils. The new chapter on building stone, masonry, and the design of piers is intended to supplement the old chapter on the Location and Design of Piers. Enough new matter has been added on cement and concrete to form an additional chapter, which includes valuable tables giving the amount of material required for concrete of different proportions. The building of piers of timber and pile bents, together with the subject of timber preservation, has been discussed in a final chapter, as fully as a general knowledge requires. It is hoped that in enlarging the field covered by The Cofferdam Process for Piers, the book will be more valuable for the practicing engineer, besides giving a general enough treatment to make it valuable for class work.
