LAP Lambert Academic Publishing Jul 2012, 2012. Taschenbuch. Condition: Neu. Neuware - The shrimp (*Pandalus borealis*) stock in Skjálfandi-bay northern Iceland is assessed. Management and assessment method of shrimp in Iceland is reviewed and suggestions for improvement are given for Sierra Leone. The analyses are based on time-series data of annual autumn surveys between 1991 and 2007 by the Marine Research Institute in Iceland. Length frequency analysis was done. Five age classes were identified and their proportion calculated using cohort slicing. Mean length corresponding to relative ages were estimated. Growth of *P. borealis* is modelled using non linear minimisation to find the best fit according to the von Bertalanffy growth curve. Growth parameters estimated were $L = 24.28$ mm (carapace length), growth $k = 0.46$ and $t_0 = -0.42$. Dynamic production model from the commercial catches and autumn surveys from 1988 to 1999 gave an average biomass of 2047 tonnes. Maximum Sustainable Yield per recruit was 1.42 g which corresponds to $F_{max} = 1.97$. Maximum Sustainable Yield = 566 tons and $F_{0.1} = 0.72$. Dynamic production model has advantage over surplus production models generally used in Sierra Leone. 56 pp. English.
