The gases must be in correct proportions and the acetylene valve must be throttled until the luminous greenish envelope around the white jet just disappears. Speed is another prime requisite to make a good joint, uniform and smooth, and the flame and solder should be run along the joint at an even speed. Before starting to weld, the edges of the pieces to be joined must be cleaned and squared and a certain clearance left, which clearance will close during the work. After the edges have been prepared and placed in the exact position wanted, the flame is applied just long enough to make the solder thoroughly fluid in the joint, and the joint permitted to set before moving the pieces. Care must be taken that the pieces do not move while the solder is in a fluid state.
