RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: . . . a stopping distance should be provided in advance of the home signal to provide for stopping the train to which the brake has been applied by the automatic stop. Ordinarily the arrangement of overlap sections increases the length of the block sections by the length of the overlap, and as the length of the section fixed the minimum spacing of trains, it was imperative to make the blocks as short as consistent with safety in order not to cut down the carrying capacity of the railway. This led to a study of the special problem presented by subway signaling and a development of a blocking system upon lines which it is believed are distinctly in advance of anything heretofore done in this direction. Block section lengths are governed by speed and interval between trains, overlap lengths are determined by the distance in which a train can be stopped at the maximum speed. Usually the block section length is the distance between signals plus the overlap, but where maximum traffic capacity is desired the block section length can be reduced to the length of two overlaps, and this was the system adopted for the Intcrborough. Description of Block Signaling System. The block signaling system as installed consists of the automatic overlapping system above described applied to the two express tracks between City Hall and Ninety-sixth street, a distance of six and one-half miles or thirteen miles of track; also to the third track between Ninety-sixth and One Hundred...
