Not illustrated. 1896 Excerpt: .An examination of the figures relating to yield shows us that the crop in 1898 was about one-fourth larger than that in 1897. Comparing our weather records for the growing months of those years we have the following data: Temperatu-e. Rainfall in inches. 1897. 1898. 1897. 1898. June, 67.3 70 1.02 3.08 July, 74.2 76.5 8.70 4.44 August 71.3 74.4 2.95 7.02 September, 64.3 67.1.99 2.57 October, 54.6 55.4 2.93 4.83 Average, 66.3 68.7 Total 16.59 21.94 It will readily be seen that the increased crop of 1898 may be accounted for by differences in amount and distribution of heat and rainfall. In June, 1898, the rainfall was such that the seed germinated quickly and had ideal conditions for rapid growth during its early days, while in June, 1897, the smaller precipitation and lower temperature were less favorable to growth. In July and August the chief important difference was in the higher temperature of 1898, while in September, 1898 has the advantage again in a fair rainfall, whereas 1897 had a decided deficiency. Our weather records show that during the past ten years there have been only two when we might not have expected a good crop of cow-peas. We are warranted, therefore, in believing that our climatic conditions are very favorable to the growth of this crop. Common Diseases of the Fowls. Their Control and Treatment. By Fred k D. Chester.
