Excerpt from The Behaviour of Colloidal Suspensions With Immiscible Solvents The occurrence of distribution of colloids between two immiscible solvents is not a priori impossible either from the point of view of the phase rule or from that of the electrified suspension theory of colloidal solutions. It may probably be easiest observed in the case of colloids with marked power of diffusion, and immiscible solvents which approach each other closely in properties and composition such as those near the critical solution temperature in two component systems, or the solutions at the plait-point of the binodal curve in three component systems. The Winkelblech effect interferes with the observation of such cases of equilibrium, for instance in the case of silver hydrosol and phenol, amyl alcohol, or isobutyl alcohol. Two experiments show the dependence of the Winkelblech effect on capillary forces. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
