Sunbury Press, Inc., United States, 2013. Paperback. Book Condition: New. 216 x 140 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Medical technology now verges on incorporating computers with the computational power of the famous Watson IBM computer and Internet-like communications directly into our anatomy. As the size and complexity of computers spiral downward, the wholesale use of these devices (as well as RFID-type technology) will become as common as a present vaccine. These initiatives will extend lifetimes, keep us younger longer and enhance our intelligence. Related to this development is the eventual merging of synthetic DNA and artificial intelligence that will bring new diagnostics, medical treatment and smart nano-prosthetics well within the horizon of the next generation. A prosthetic genome hastens the day when enhanced life forms, such as human organs, can be made entirely from a fusion of living organisms and non-living materials. Just as computers, cell phones, the Internet, Google, and Facebook continue to change our social reality and some believe our brain biology, the author contends that the proliferation of in-the-body technologies will dramatically change everything from how we view each other, to how we fashion policy and law to guard against activities that could jeopardize our well-being, such as market forces may look to squeeze out efficiencies at the expense of performance and reliability or against those who, for instance, would dare to unleash digital viruses into a world filled with biomedical devices receptive to Internet-style communications. Overtime our artificially controlled metabolisms may begin to alter our natural biological evolution. At what point does the widespread application of cyborg-assisted-life change our attitudes about what the notion of human means. The author focuses on the moral implications of the new technology, its influence over our future culture, personal identity and autonomy, and why...
