Taylor Francis Ltd, Netherlands, 1983. Hardback. Condition: New. Language: English . Brand New Book. Chemical markers have brought important new dimensions to the studies of the brain. As a result of this development, the chemical anatomy of the neurons system is being explored in great detail. This new functional neuroanatomy has demonstrated new organizations of perikaryal groupings of neurons and pathways from these cells which often follow unexpected courses. The field of chemical identification has recently been improved by methods reported in this volume, e.g. serotonin locatization and direct labelling of cholinergic neurons. The new techniques provide a new pair of glasses for everyone working in this field. This volume will be of great interest for researchers in neuropharmacology, neuroanatomy, immunochemistry, neuroendocrinology, neuroscience and cell biology.
