Design of modified release drug delivery systems

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Design of modified release drug delivery systems | Tailoring or modulation of drug release from delivery systems comprises a major area of research in pharmaceutical field where the primary objective is to either sustain drug release or to design orodispersible tablets. This objective can be successfully achieved by use of a class of natural excipients - gums and mucilages. These polysaccharidic plant-derived biopolymers because of their unique swellability in aqueous medium can...
