Until recent years there has been a remarkable gap in the medical literature and knowledge concerning health and disease during adolescence. Pediatrics, which treats of the diseases of infancy and early childhood and which has lately become a prominent specialty, usually leaves the child at eight or ten, and in the text-books of Heneoch, Stenzl, Spitzner, Burns, Strumpell, and Mobius, or other standard authors or in the files of the special journals devoted to children s diseases, one finds little attention paid to even the early stages of puberty. So too the diseases of senescence and the menopause, although not a specialty, have a copious and valuable literature. A.
