Excerpt: .not conform to type in size, shape, or even color of fruit. If we then wish to assume that our results are due to multiple factors, and that our parents are heterozygous for many size factors, we must at the outset admit that the heterozygosity is permanent in an inbred line. We are then forced to assume another factor for each added multiple factor which keeps that multiple factor inactive. That means we must assume that for each character studied each type is homozygous for a certain size factor which it exhibits, either homozygous or heterozygous for at least one other size factor which it does not exhibit, and homozygous for an inhibitor factor for each separate additional size factor. We must further admit that there are no loose, uninhibited additional size factors, so that all the various sized factors and their respective inhibitors happen...
