

Improvements to biorelevant dissolution testing: lyophilized media, buffer alternatives and miniaturized apparatus

Filesize: 4.52 MB

Reviews

This pdf is so gripping and intriguing. I could comprehend almost everything using this composed e ebook. You are going to like just how the article writer create this ebook.

(Miss Dakota Zulauf)

IMPROVEMENTS TO BIORELEVANT DISSOLUTION TESTING: LYOPHILIZED MEDIA, BUFFER ALTERNATIVES AND MINIATURIZED APPARATUS

To read **Improvements to biorelevant dissolution testing: lyophilized media, buffer alternatives and miniaturized apparatus** eBook, remember to refer to the link under and download the document or get access to additional information that are in conjunction with IMPROVEMENTS TO BIORELEVANT DISSOLUTION TESTING: LYOPHILIZED MEDIA, BUFFER ALTERNATIVES AND MINIATURIZED APPARATUS eBook.

Cuvillier Verlag Aug 2009, 2009. Buch. Book Condition: Neu. 211x147x19 mm. Neuware - Dissolution in different steps of pharmaceutical drug development was considered in this work. Dissolution is used as informative tool throughout the entire development process: After identification of a possible drug candidate, intrinsic dissolution in different buffer media is tested for physicochemical characterization. In galenics dissolution is used to develop and optimize formulations by comparative release studies. During scale-up dissolution testing is used to observe influence of process or parameter changes. For regulatory affairs all of these dissolution studies are of interest and many have to be presented to the authorities. Most of the dissolution testing designs in pharmaceutical development are following pharmacopoeial monographs or general chapters and official guidelines. In addition these 'official' dissolution testing setups, a progression of more innovative dissolution methods closer to physiological conditions are used. Devices simulating movement and flow of the GIT combined with media simulating the gastrointestinal fluids are often used. Disadvantages of these methods are that they are time-consuming and expensive, both of which limit throughput. The aims of this thesis were to (a) reduce time consumption regarding preparation of biorelevant dissolution, (b) increase biorelevance of the media FaSSIF and FeSSIF by substituting the non-physiological buffer systems for bicarbonate and (c) to increase throughput by miniaturization of dissolution devices. To meet the first goal a novel preparation method for the biorelevant media FaSSIF and FeSSIF was established. The conventional method uses chlorinated organic solvent, is time-consuming in preparation (approx. 2 hours) and needs to be done daily. The investigated method uses freeze-drying for the preparation of instant biorelevant media. The instant media only consist of bile salt and lecithin in mixed micelles. In situ preparation is done by simply adding blank buffer to the rapidly dissolving lyophilisate. Freeze-dried product gave comparable results to...
