

Evolution of Black Holes in Anti-de Sitter Spacetime and the Firewall Controversy (Hardback)

Filesize: 7.59 MB

Reviews

A high quality book and also the font employed was intriguing to read. I was able to comprehend every thing out of this created e book. You wont really feel monotony at whenever you want of the time (that's what catalogues are for concerning should you check with me). (Prof. Johnson Cole Sr.)

EVOLUTION OF BLACK HOLES IN ANTI-DE SITTER SPACETIME AND THE FIREWALL CONTROVERSY (HARDBACK)

Springer-Verlag Berlin and Heidelberg GmbH Co. KG, Germany, 2016. Hardback. Condition: New. 1st ed. 2016. Language: English . Brand New Book. This thesis focuses on the recent firewall controversy surrounding evaporating black holes, and shows that in the best understood example concerning electrically charged black holes with a flat event horizon in anti-de Sitter (AdS) spacetime, the firewall does not arise. The firewall, which surrounds a sufficiently old black hole, threatens to develop into a huge crisis since it could occur even when spacetime curvature is small, which contradicts general relativity. However, the end state for asymptotically flat black holes is ill-understood since their curvature becomes unbounded. This issue is avoided by working with flat charged black holes in AdS. The presence of electrical charge is crucial since black holes inevitably pick up charges throughout their long lifetime. These black holes always evolve toward extremal limit, and are then destroyed by quantum gravitational effects. This happens sooner than the time required to decode Hawking radiation so that the firewall never sets in, as conjectured by Harlow and Hayden. Motivated by the information loss paradox, the author also investigates the possibility that monster configurations might exist, with an arbitrarily large interior bounded by a finite surface area. Investigating such an object in AdS shows that in the best understood case, such an object -- much like a firewall -- cannot exist.
