

The Electrician Volume 31

Filesize: 6 MB

Reviews

This publication is definitely not simple to begin on studying but quite fun to see. It really is full of knowledge and wisdom I am just effortlessly can get a satisfaction of studying a created pdf.
(Alfreda Bradtke)

THE ELECTRICIAN VOLUME 31

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: .is nil is 10-5 for A a, 4-3 for B A 2 3 for C y, 143 for D 8, and 1-22 for E t. Fig. 2.--Variation of Capacity. capacity of the condenser is represented by the horizontal distance measured from S, such as S Q, the scale for capacity being so chosen that when $K \sin^2 \theta = 1$ the length SO represents the corresponding value of K. Then for any value, S Q of the capacity K, the inductance $L/K \sin^2 \theta$ must be inversely proportional to S Q and must be SQ^2 where $SQ \cdot SQ = SP$ The point Q can easily be found graphically by describing a semi-circle on S O as diameter, finding by compasses the point P on the vertical from O, for which $SP = SQ$, joining S P, cutting the circle in P, and finding Q such that $SP = SQ$, Fig. 3.--Variation of Frequency. Similarly, the point R corresponding with any values S R the capacity can be easily found. Now S O is the inductance of the coil, or $L \sin^2 \theta$, while SR is the inductance, $L/K \sin^2 \theta$, of condenser when the capacity is represented by S R. So that R O is equal to the difference $L \sin^2 \theta - L/K \sin^2 \theta$ of the two inducts It follows that if $R A$ is the resistance of the coil, the length RA represents the voltage needed to make a given current w through the conductors when the capacity is equal to...
