Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The San Joaquin Experimental Range The actual grazing value of individual acres is low but there are many of them. Collectively they are the supporting base for California s second largest agricultural industry - livestock production. This production of meat, milk, and wool is the only method of harvesting the forage wealth produced by these acres from year to year. Grass, using the term in a collective sense, is the most valuable single crop produced in the state. Under the multiple-use concept these uncultivated lands of California have value for watershed development, timber production, livestock grazing, and recreation and wildlife. In different areas one of these uses Will become paramount and the others fall in different places of relative importance. The beef cattle population of California numbers over head and there are about sheep. In addition, about feeder. And slaughter cattle and over sheep are shipped into the state annually to meet consumption requirements. Beef production is important in all areas and of major importance to the agriculture of at least two thirds of the counties. The foothills of the Sierra Nevada are of great importance for grazing and five of the ten leading counties in number of beef cattle are in this area, namely Tulare, Kern, Merced, Fresno, and Madera. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work.
