Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Mining Claims and Sites on Public Domain Lands The three basic types of minerals on Federally administered (public domain) lands are locatable, leasable, and salable. These minerals have been defined by Federal laws, regulations, and legal decisions. This pamphlet discusses locatable minerals. The major Federal law governing locatable minerals is the Mining Law of 1872 (May 10, as amended (30 U.S.C. 22). This law provides citizens of the United States the opportunity to explore for, discover, and purchase certain valuable mineral deposits on Federally administered lands. These minerals include metallic minerals and certain nonmetallic minerals. The law also sets general standards and guidelines for claiming the rights to minerals discovered during exploration. Other provisions also allow for the development of local rules, consistent with Federal law. Therefore, several states have their own manner of locating and recording mining claims, tunnel sites, and mill sites on public lands within their boundaries. This pamphlet is a brief introduction to the locatable minerals program on public domain lands. It also provides individuals with sources for finding more detailed information. Sources in the last section of this booklet provide information on the following topics: 1) geology and mineral resources of a particular area, 2) mining and milling techniques, 3) surface protection and reclamation requirements, and 4) other Federal and State legal requirements.
