Water Supply Outlook and Federal-State-Private Cooperative Snow Surveys for Colorado and New Mexico: May 1, 1965 (Classic Reprint) (Paperback)

By Jack N Washichek

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Water Supply Outlook and Federal-State-Private Cooperative Snow Surveys for Colorado and New Mexico: May 1, 1965 The climate of the cultivated and populated areas of the West is characterized by relatively dry summer months. Such precipitation as occurs falls mostly in the winter and early spring months when it is of little immediate benefit to growing crops. Most of this precipitation falls as mountain snow which stays on the ground for months, melting later to sustain streamflow during the period of greatest demand during late spring and summer. Thus, nature provides in mountain snow an imposing water storage facility. The amount of water stored in mountain snow varies from place to place as well as from year to year and accordingly, so does the runoff of the streams. The best seasonal management of variable western water supplies results from advance estimates of the streamflow. A snow survey consists of a series of about ten samples taken with Specially designed snow sampling equipment along a permanently marked line, up to 1000 feet in length, called a snow course. The use of snow...

Totally one of the better pdf I have at any time read through. It really is simplified but shocks within the 50 % from the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.
