Reviews

This is the finest book i have got go through right up until now. I have got read and i also am confident that i am going to planning to read once again yet again in the future. You will not truly feel monotony at at any time of the time (that's what catalogs are for about if you check with me).

(Taylor Medhurst)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1902 Excerpt: .and lies in the same plane with it. A body which regularly reflects a large amount of light from its surface is called a mirror. The smoother the surface of the medium against which these waves strike, the better the reflection; hence mirrors are made of solids which admit of a very high polish, as glass and some of the metals. Mirrors are either plane or curved. Of the curved there are two kinds, --the concave and the convex. Plane Mirrors.--Experiment 64.--Direct a beam of light into a darkened room through a small hole, and trace its course by dust particles, then place a plane mirror on a table so that these rays may strike it, as in Fig. 60, and note direction of the reflected rays. With a protractor placed so that its 90-degree mark takes the direction BP, determine the angles of incidence and reflection. How do they compare? Set the mirror in other positions, and measure again. Another method of finding these angles is to let the light pass through a hole in a card, C, and fall upon a mirror from which it is reflected to a hole in another card, O, Fig. 61. Then PH being equal to PD, and DA equal to HB, it is easy to prove angle DPA equal to angle HPB, and $APN = BPAT$. Rays of light which fall upon mirrors may be parj, -, . jt allel, convergent, or di vergent; and all of the effects...
